

## BT Infonet Dedicated Internet Access

Multinational corporations (MNCs) have realised the impact of the “global” economy. Now, more than ever, companies must position themselves as global market players to ensure sustained revenue, a competitive edge and adaptability to the next major market shift. The Internet provides the ideal medium for this global reach.

### Internet Services

Features and benefits for Dedicated Internet Access:

- Consistent performance via BT Infonet’s premier performance global Tier 1 Internet backbone
- Significant peering globally to expedite access to local Internet content
- Seamless interconnectivity with BT Infonet Global Frame Relay, private IP and ATM services to allow for the provisioning of a corporate extranet
- Web-based real time reporting for each individual connection

### Dedicated access to the Internet

BT Infonet’s Dedicated Internet Access (DIA) is a reliable and scalable worldwide Internet access service. It is specifically designed to maximise today’s business-quality VPN connectivity needs. DIA eliminates the need for corporations to search each country to find a provider that offers high-quality Internet access because BT Infonet is the single source for global Internet connectivity. With coverage in 50 countries, BT Infonet’s Internet network is one of the broadest in the world.

Whether it is used for establishing an Internet Virtual Private Network (IVPN) or high-speed Internet Web-browsing, BT Infonet offers premium performance Internet connectivity. DIA provides high performance Internet connectivity with service level agreements (SLAs) to MNCs, small to medium enterprises (SMEs) or Service Providers (ISPs, ASPs, etc.) requiring an Internet connection. DIA also provides MNCs with the ability to offer a greatly increased price-to-performance ratio, while reducing the overall corporate networking cost.

## **Additional features and benefits for Dedicated Internet Access**

- **Internet VPN**

When bundled with a premises firewall or IPSec encryption, DIA provides secure communication whilst also leveraging the low cost of the Internet. Clients have the option of allowing or preventing connectivity to the public Internet.

- **High-speed DIA for Service Providers**

For regional ISPs, DIA offers high-speed connectivity to the global Internet. High-speed DIA is available at speeds ranging from T1/E1 to 622Mb in select locations globally.

- **Customer Specific Web-Based Reporting**

Consistent performance is vital for today's Internet enabled applications. It is just as important to have visibility into the performance of all aspects of both your corporate intranet and/or extranet. Included with the DIA service are customer port-specific reports that measure all aspects of BT Infonet's DIA service level guarantees and report on them in "real time" via a secure web site.

DIA provides your dedicated offices high performance access to the public Internet and the ability to exchange information via your corporate intranet. By leveraging the low costs associated with the Internet, you can reduce your monthly data communication costs , consolidate Internet and intranet providers and further reduce the overall infrastructure costs associated with data communications.

For more information about Dedicated Internet Access or any other BT Alliance networking solutions, contact your local BT Alliance Representative or visit us at [www.bt-alliance.com](http://www.bt-alliance.com).

## About BT Alliance

BT Alliance is a partner programme which supports BT Global Services in the selling, distribution and support of a range of products and services from across the BT portfolios.

Known for quality of service, BT Alliance partners are leading providers of managed network communications services for multinational entities. Being a customer of a BT Alliance partner gives you confidence that you are dealing with a recognised, certified partner who can provide you with best in class products provided by BT Alliance and supported by trained staff.

Working with BT Alliance partners, customers have access to a comprehensive BT portfolio given that BT's partners take advantage of BT's large and significant annual investment in R&D to bring the right product to market at the right time and price.

Customers can be assured that their local and global needs are taken into account, as BT Alliance partners not only partner with BT but with each other.
