

BT Infonet Global Private Network Services

Point-to-Point Connections

In today's competitive environment, multinational corporations (MNCs) are looking for ways to control costs and focus on core initiatives. In an effort to obtain these results, they are evaluating a move away from the procurement and in-house management of international leased lines — while also seeking to integrate voice, video and data applications on a single network.

Intranet Services

GPNS offers:

- Point-to-point protocol transparent connections
- Seamless connectivity — Global connections fully-managed by BT Infonet, enabling clients to focus on their core business objectives
- Scalability — A flexible solution that accommodates your network's changing needs
- Cost-effective — One network supporting all applications, saving costs on equipment, bandwidth and staff

BT Infonet Global Private Network Services (GPNS) is a solution for multinational clients looking to combine their applications on a single network. This service offers a single and comprehensive resource for clients requiring dedicated point-to-point and protocol-transparent network connections — ranging from 64 Kbps through 2 Mbps.

GPNS allows clients to move away from the procurement and in-house management of international leased lines, while also ensuring an easy upgrade path to next generation networking services. The service uses Circuit Emulation Service (CES) to access BT Infonet's global ATM backbone and offers the same quality of service (QoS) and 24/7 global support that BT Infonet clients have enjoyed for over 32 years.

GPNS offers protocol transparency for MNCs seeking a global networking infrastructure able to transport any and all applications via a single, all encompassing network.

Additional benefits include:

- Aggregation of voice, video and data traffic at narrow band speeds — T1/E1 and lower
- Easy migration path for next generation networking
- Significant reduction in network complexity relative to installation and network adjustments
- A highly resilient network that automatically restores virtual circuits should failures occur

Outsourcing to BT Infonet will help clients increase their network capacity and flexibility, enabling clients to focus on their core business objectives. BT Infonet GPNS delivers the convenience of single-source billing, end-to-end provisioning, 24/7 global technical support and management offered in the local language and currency.

For more information about Global Private Network Service or any other BT Infonet networking solution, contact your local BT Alliance Representative or visit us at www.bt-alliance.com.

About BT Alliance

BT Alliance is a partner programme which supports BT Global Services in the selling, distribution and support of a range of products and services from across the BT portfolios.

Known for quality of service, BT Alliance partners are leading providers of managed network communications services for multinational entities. Being a customer of a BT Alliance partner gives you confidence that you are dealing with a recognised, certified partner who can provide you with best in class products provided by BT Alliance and supported by trained staff.

Working with BT Alliance partners, customers have access to a comprehensive BT portfolio given that BT's partners take advantage of BT's large and significant annual investment in R&D to bring the right product to market at the right time and price.

Customers can be assured that their local and global needs are taken into account, as BT Alliance partners not only partner with BT but with each other.
